

Reinsurance General Software-As-A-Service

One digital solution that can be inserted into your existing landscape easily to transform and streamline reinsurance processing, improve data quality, reporting compliance and automate tasks.

Reinsurance

Reinsurance is a critical part of any insurance business and is often underinvested when compared to front-end sales and distribution platforms.

eBaoTech believe a robust reinsurance management can have effective and meaningful impact to the insurance carrier's top and bottom lines. eBaoTech Reinsurance Software-As-A-Service is designed purposefully, and eBaoTech will continually invest to enhance the application capabilities.

Why change now?

COVID-19 has fundamentally changed how the world works. Productivity is heavily dependent on the ability to collaborate with internal and external business partners efficiently, and this most often requires a digital application to process business and information real time.

Regulatory environment continues to tighten Insurance Carriers, the call for stringent risk management control, solvency requirement and new reporting frameworks such as IFRS 17 and other regulatory changes. More controls and governance are expected with increasing Fintech and Insurtech entrants in the market.

In addition, the changing geopolitical dynamics coupled with the increased frequency of natural events due to climate change amplify the need of active and real time risk management reporting on geographical and segment risk concentration.

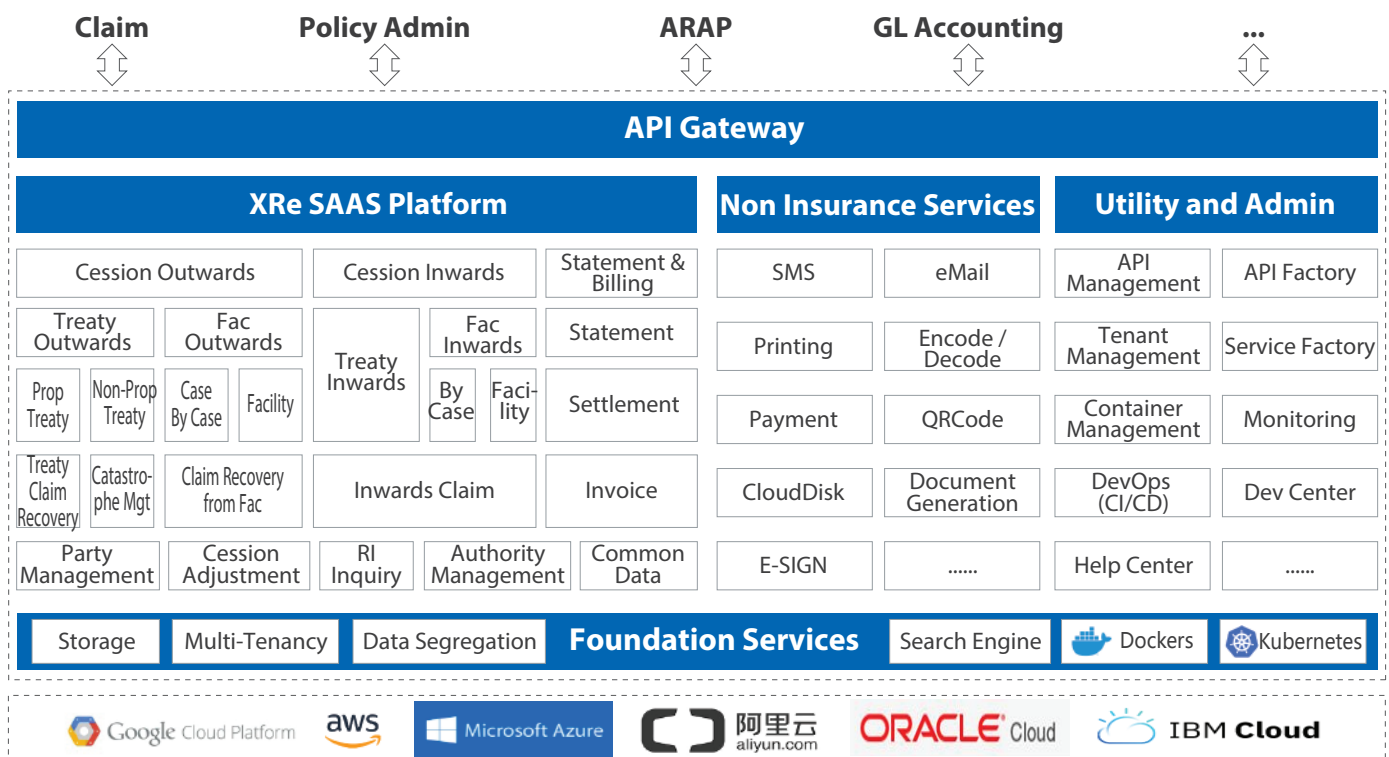

Insurers that are still processing reinsurance relying on **disparate processes designed around legacy system limitations, manual consolidations and reconciliations** might be significantly disadvantaged strategically and operationally.

Benefits of Software-As-A-Service

- High efficiency for fully online automatic process, auto risk allocation and claim recovery
- Fast for data analysis and decision making with delicacy data management
- Easy and fast onboarding by providing standard API service and business initial data template
- Low capital investment
- Safe and reliable user experience
- Continuous innovations and upgrades supporting any new reinsurance arrangements

Key Business Features

- Consolidate **all types** (inward/outward/ retrocession) of proportionate and non-proportionate reinsurance contracts digitally in one application improving **data quality, productivity, and reporting**.
- **Renewal** made easy with all data in one place.
- The **Contract Management** module is intuitive and user-friendly, built to mimic **real-life reinsurance contract construct**, including but not limited to,
 - Support multi-currency
 - **Sections/subsections** by risk class and coverages.
 - Special features such as **loss participation / corridor, sliding scale commission, profit commission**.
